

HIV Criminalization Scan

Regional Report Eastern Europe and Central Asia
Written by Jessica Whitbread and Svitlana Moroz

Introduction

The criminalization of HIV exposure and transmission is a growing human rights concern in Eastern Europe and Central Asia. This report presents the findings carried out by a regional team of advocates as well as local community partners in relation to laws, policies and legislation that criminalize people living with HIV in the region.

HIV Criminalization

HIV criminalization refers to the use of existing criminal laws or HIV specific legislation in regards to transmission and/or perceived risk of exposure to HIV. The overly broad use of laws that criminalize people living with HIV is a public health concern because it undermines evidence-based public health strategies for HIV prevention, treatment, care and support for those living with HIV and ignores scientific advancements relating to the risk of HIV transmission. Criminalization increases stigma surrounding HIV status and casts people living with HIV as predisposed to criminality, which in turn increases discrimination. Critically, rather than reducing transmission of HIV, fear of prosecution may deter many people living with HIV, in particular women and key populations (such as people who use drugs, sex workers, migrants, men who have sex with men and transgender people) from accessing needed treatment care and support, discourage disclosure, and increase the vulnerability of people living with HIV to violence¹.

By shifting responsibility for HIV solely to a person living with HIV the criminalization of HIV creates an atmosphere of false sense of security for the general public and weakens messages regarding safe sex practices. In many cases the additional burden and criminal implications of not disclosing one's HIV status intensifies the challenges to openly talk about HIV within a given context such as sexual relationship, in a workplace setting, or in relation to parenthood. As a result, people are not more protected by HIV criminalization, in fact it can be the opposite.

A misguided focus on criminalization creates an atmosphere of false efficiency of the state, by reducing focus and energy on proven and evidence-based strategies for responding to the HIV epidemic. Criminalization distracts from investment and focus on these strategies while being counterproductive to the effective dissemination of information and support for proven prevention programs.

For all these reasons, a growing coalition of international human rights advocates are calling for the elimination of criminal laws that unjustly target people living with HIV.

Eurasian Women's Network on AIDS

The [Eurasian Women's Network on AIDS](#) (EWNA) brings together representatives from 11 countries in Eastern Europe and Central Asia. EWNA is affiliated as the EECA regional network of the [International Community of Women Living with HIV](#) (ICW). We are a network of regional leaders who advocate the rights of women living with HIV and those vulnerable to HIV in the region. These rights relate to access to health services, including reproductive

¹ International Community of Women Living with HIV. (2015). Criminalization of Women Living with HIV: Non-disclosure, exposure and transmission. Retrieved from <https://tinyurl.com/yab9rg9l>

health, the elimination of violence against women, HIV criminalization and the criminalization of key populations, and for women living with HIV to be involved in the public and political debate on which they depend for their lives and health.

EWNA are working with the [Global Network on People Living with HIV](#) (GNP+) and the [HIV Justice Worldwide](#) to contribute to the current body of literature on HIV criminalization both regionally and globally. Educating our communities and building capacity in our networks and beyond to ensure that people living with HIV that policy and programs in regards to have been aimed at removing barriers to the expansion of prevention services, treatment and care for HIV.

Purpose and Objectives of this Report

The purpose of the report is to update and analyze the current legal environment in regards to HIV criminalization in Eastern Europe and Central Asia. The report also brings opportunity for new partnerships and strengthening EWNA's involvement in the regional and global HIV movements to end criminalization. For this report EWNA worked closely with a team of local and regional advocates concerned about the current state of HIV criminalization in not only their countries but within the region and as well as global trends. Every step of this report was developed jointly and led by people, in particular women, living with HIV. Therefore, the team used a gendered lens when collecting data and analyzing the findings. This information will be supporting the development of *Advancing HIV Justice 3* which will compile all the regional updates in regards to HIV criminalization laws. While this is a regional report, it focuses on reviews of 7 countries: Belarus, Georgia, Kazakhstan, Moldova, Russia, Ukraine and Uzbekistan, and performs a more limited review on 2 more countries Tajikistan and Estonia. EWNA plans to continue and expand this project to more countries in the EECA region in 2018, funding pending.

Methodology

This project was led by the EWNA who prioritized community based research methods for all data collection inclusive of report writing and other follow up communications. For this review a team of community based peer data collectors was established as well as a project coordinator, regional data coordinator, communications specialist and a final report writer. The methodology included:

1. A broad review of existing information on HIV criminalization in EECA using the former [HIV Criminalization Scan](#), [HIV Justice Network](#) resources inclusive of [Advancing HIV Justice 2 report](#), and the [Barring the Way to Health: Legal and regulatory barriers which impede the HIV care continuum in Europe](#).
2. Development of research and reporting tools for in country community based partners and media monitoring report system.
3. Selection of EWNA affiliated community advocates and/or focal points working in country.
4. Provision mini grants to conduct the following activities in country:
 - community interviews, review laws and legislation pertaining to HIV criminalization,
 - documenting and/or data collection about HIV criminalization cases through informants, state legal records
 - media monitoring between 2015 – 2017 (with some variations depending on country),
 - formation a database of organizations and experts, providing legal support.
5. Analysis and further exploration of data collected.
6. Drafting of final report.
7. Dissemination of materials and findings in regards to HIV criminalization through the EWNA social media channels.

Sources of Data

- Criminal Codes of countries;
- Codes of Administrative Offences of countries;
- Official websites of public authorities;
- Websites and pages in social networks of non-governmental organizations;
- Media outlets and other news sources;
- Information provided by representatives of civil society organizations;
- Responses of the governmental bodies to activists official requests.

Data Collection Team

Regional Coordinator - Svitlana Moroz,

Regional Consultant - Natalia Sidorenko,

International Consultant - Jessica Whitbread,

Communications – Alina Yaroslavska,

In country community experts - Olga Turkina, Belarus; Ekaterine Gardapkhadze, Georgia;

Elena Bilokon, Kazakhstan; Natalia Palamar, Moldova; Maria Godlevskaya, Russia; Olena Stryzhak, Ukraine.

Acknowledgments

Lachin Aliev, Estonia; Medea Khmelidze, Georgia; Svetlana Garkusha, Kazakhstan; Vilkhovaya Zhanna, Moldova; Valentina Frolova and, Alyona Tarasova, Russia; Sergiy Kondrtyuk and Alyona Druzhinina, Ukraine.

EWNA would also like to acknowledge the work of the numerous informants that shared information that for safety reasons cannot be listed here.

Report Limitations

This report does not cover the full extent of the ever-changing landscape of HIV criminalization in EECA. Due to time and resource limitations there may be gaps in the comprehensivity of information at the country level, including the existence of additional laws and restrictions placed on people living with HIV. It is also noted that because of the multiple languages in the region, there may be slight variations in translation from original form or meaning². The knowledge know about increased sentencing and mandatory testing, is in many cases anecdotal from community informants opposed to being documented in legal text. Finally, the data collected in the EECA did attempt to be inclusive of key populations such as sex workers, people who use drugs and the LGBTQ communities.

² Legal language in English was cross check with the HIV Criminalization Scan in cases where no changes in the law had occurred.

Executive Summary

There are 20 countries that make up the Eastern European and Central Asian (EECA) region³. In the EECA region there are currently 15 countries that have HIV specific laws with sentencing that ranges from community service to 15 years in prison. In 3 other countries they use existing criminal laws to prosecute people living with HIV. In Albania, and Bosnia and Herzegovina, for example, there are currently no HIV specific laws though there is consensus that general criminal laws could potentially be used to prosecute people living with HIV.

Countries	HIV Specific Laws	HIV Non Specific Laws	Cases
Albania	No	No	No/Unknown
Armenia	Yes	Yes	Yes
Azerbaijan	Yes	Yes	Yes
Belarus	Yes	Yes	Yes
Bosnia and Herzegovina	No	No	No/Unknown
Estonia	No	Yes	Yes
Georgia	Yes	Yes	Yes
Kazakhstan	Yes	Yes	Yes
Kyrgyzstan	Yes	Yes	Yes
Latvia	Yes	Yes	Yes
Lithuania	No	Yes	No/Unknown
Macedonia	No	Yes	No/Unknown
Moldova	Yes	Yes	Yes
Montenegro	Yes	Yes	No/Unknown
Russian Federation	Yes	Yes	Yes
Serbia	Yes	Yes	Yes
Tajikistan	Yes	Yes	Yes
Turkmenistan	Yes	Yes	No/Unknown
Ukraine	Yes	Yes	Yes
Uzbekistan	Yes	Yes	Yes

All of the HIV specific laws, in some form, criminalize exposure and/or transmission. Within the region the laws range in severity. For example, in the Russian Federation Criminal Code Article 122: *HIV transmission* in 2003 was amended to include a note which states that if a person living with HIV discloses their status and a person voluntarily agrees to perform the actions that may create a risk of HIV transmission then the person living with HIV no longer holds criminal liability for any potential transmission that may occur (see section on the Russian Federation for more detail). Several countries have similar clauses in their legislation that can protect a person living with HIV, for instance Kazakhstan and Moldova. In countries such as Belarus and Uzbekistan, these do not exist. Criminal charges can be brought against a person living with HIV whether or not the partner or “victim” wishes to proceed with criminal

³ Albania, Armenia, Azerbaijan, Belarus, Bosnia and Herzegovina, Estonia, Georgia, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, the former Yugoslav Republic of Macedonia, Moldova, Montenegro, the Russian Federation, Serbia, Tajikistan, Turkmenistan, Ukraine and Uzbekistan.

charges. In many cases, it is a partner's diagnosis of HIV that alerts the authorities of the said crime. Since 2015, there has been a drastic increase of HIV criminalization cases in Belarus (at least 50 counted in the region of Gomel in the first half of 2017), many of cases being brought to court even when a person had disclosed their HIV status and their partner agreed to continue with the relationship.

In EECA, heterosexual sexual encounters were by far the most commonly implicated in HIV criminalization cases. The data collection in this report showed that regionally slightly higher numbers of men being charged than women. However, our in-country informants gather numerous stories of women living with HIV who were charged with exposure or transmission or threatened by a partner to do so. In these case studies, women shared experiences of violence, threats and blackmail against them based on fear of their HIV status being used against them in a court of law. Many of the women looked for legal supports in peer-based settings sometimes after enduring years of threats and/or abuse. HIV criminalization is a gendered issue. Previously the laws were thought to protect women from HIV. Unfortunately is not the reality as HIV criminalization is leaving women more vulnerable to increased violence and structural inequalities in relation to HIV. HIV criminalization leaves women susceptible to property loss, removal of children, shunning in their communities and economic consequences⁴.

Finally, the data collected in the EECA did attempt to be inclusive of key populations such as sex workers, people who use drugs and the LGBTQ communities. While there were cases of sentences being increased based on a person's HIV status, such was the case of a woman living with HIV who was charged with a drug related offense in Uzbekistan, but cases involving key populations living with HIV criminalization were limited. This is most likely due to other laws that criminalize sex workers, men who have sex with men, transgender people and people who use drugs in any of the regional countries. The knowledge know about increased sentencing and mandatory testing, is in many cases anecdotal from community informants opposed to being documented in legal text.

In general, EECA countries have strict and in some instances non-flexible laws pertaining to HIV non-disclosure, exposure and transmission. Despite this there are numerous community non-government organizations and advocates working on this issue at the region. This report synthesizes the data collected for 7 of the 20 countries as well as providing updates for 2 other countries.

⁴ ATHENA Network. (2009). 10 Reasons HIV Criminalization is Bad for Women. Retrieved from <https://tinyurl.com/ybz9kcdk>

Country:**Belarus****Law**

Criminal Code of the Republic of Belarus, Article 157. *Infecting with Human Immunodeficiency Virus*. Both exposure and transmission are subject to prosecution.

Part 1. Deliberately endangering another person by infecting with Human Immunodeficiency Virus (HIV infection) - is punished by fine or deprivation of freedom for a term up to three years.

Part 2. Thoughtlessly or with indirect intention infecting another person with HIV infection by the person who knew that he has this illness - is punished by deprivation of freedom for a term of from two up to seven years.

Part 3. The act envisaged by part 2 of the present article committed to two or more persons or to a minor, or with direct intention - is punished by deprivation of freedom for a term from five up to thirteen years.

Other Laws for Consideration:

Part 3 of Article 166 of the Criminal Code provides a punishment of imprisonment for 8 - 15 years where HIV infection occurs through an act of rape.

Part 3 of Article 167 of the Criminal Code also provides a punishment of imprisonment for 8 - 15 years where HIV is transmitted negligently through 'forcible acts of a sexual nature'.

There is no relevant provision in the Code of Administrative violations. However, the Code consists of the article 16.2 Concealment of Source of Venereal Disease or deviation from the inspection.

Prosecution

128 cases related to HIV transmission were registered with the Ministry of Internal Affairs between 2015 and June 2017. It is unknown if there are other exposure related cases. Since 2013 184 people were convicted under the Article 157. The Gomel region reported the highest amount of cases in the country with 83 cases being before the courts under Article 157. Between 2012 and 2016, 38 cases were reported. But by the first half of 2017, at least 50 cases had been filed⁵. There has been a drastic increase in 2016 (30 cases) and 2017 compared to 2013 (19 cases), 2014 (17 cases), and 2015 (12 cases).

The vast majority of the cases involve people heterosexual relationships. The law is understood and applied in a way that a person living with HIV has not only duty to disclose but duty to not put another person at risk of acquiring HIV. While some cases brought to the courts include non-disclosure, a large number of them are between sero-discordant couples where both parties are aware of HIV in the relationship. Charges are laid by the state and are regardless of the partner's desire to prosecute and/or protective measures were taken by the person living with HIV such as wearing a condom or having an undetectable viral load.

Cases are often found out when people report their sexual relationship status to people living with HIV to health care providers or when a pregnancy is involved. In order to be charged the person living with HIV has to know their HIV status and be registered with the state.

Discussion

As per community reports, people living with HIV are not getting the proper treatment, care and support that they need because of legal barriers that Article 157 creates in the lives of people living with HIV.

In practice, the laws in Belarus keeps people who learn anonymously of their HIV status from accessing treatment, education and counseling in relation to their HIV status. People in Belarus can know about their HIV status and not be registered. Without being formally aware of the presence of HIV, then a person can avoid is not criminally liable. When people face the threat of criminalization, ignorance of the diagnosis of HIV can be the most effective legal protection. This in turn affects the spread of HIV, in the country. People who are not registered as living with HIV with the state do not receive anti-retroviral treatment and therefore endanger themselves and their sexual partners.

Article 157 of the Criminal Code of the Republic of Belarus contradicts international and national legal norms. Under current legislation, a person living with HIV is denied other rights as provided in their legislation such as Article Article 22, 28 and 32 of the Belarus Constitution, and Article 13 from the Marriage and Family Code. The Constitution states that citizens are equal before the law and are entitled without any discrimination to equal protection of rights and legitimate interests. Based on this article, people are not allowed to be discriminated against due to illness.

In sero-discordant couples, any attempt to conceive a child can be interpreted as posing an HIV-negative partner to the risk of contracting HIV. Therefore, couples that conceive (or attempt to conceive) children could potentially have the partner who is living with HIV be charged under Article 157. Among preventive measures that reduce the risk of HIV transmission, only antiretroviral therapy is currently available in addition to condoms though these are not taken into consideration in regards to Article 157. Sperm washing is not included in the clinical protocols and in practice couples may refuse to conduct it. Pre-exposure prophylaxis and post expose prophylaxis not regulated in Belarus.

Criminal cases are pursued against people who live in couples where one partner is HIV-positive, under part 1 and 2 of Article 157 of the Criminal Code, even if they have informed their partner about HIV status. In couples with children there is a risk of the children remaining in single-parent families or without parental care, because of this law. The Article 32 of the Constitution of the Republic of Belarus guarantees protection by the state of such important institutions as marriage, family, motherhood, fatherhood and childhood. The state can not deprive an individual of their rights. Article 28 of the Constitution of the Republic of Belarus states that “everyone has the right to protection from unlawful interference in his private life”. Currently, an HIV positive partner in a discordant couple is criminally liable even when their partner knows about HIV and takes responsibility for maintaining his own health.

The Belarusian Community of People Living with HIV notes that in the criminal laws of other countries there is the possibility of a person living with HIV to be released from criminal responsibility if they disclose and receive consent from another person and/or took appropriate measures to greatly reduce the risk of transmission. The application of this rule, as prescribed in the law, will protect the rights and interests of people living with HIV in Belarus. Though ultimately, this is not enough to counteract the damage to the HIV response caused by criminalization.

In November 2017, the Belarusian Community of People Living with HIV sent an appeal to the Constitutional Court of the Republic of Belarus with a proposal to introduce a note to Article 157 of the Criminal Code, providing for special exemption from criminal liability⁶. And also made a proposal to apply Article 157 only in cases when there are victims and a statement about intentional HIV transmission.

Informants

Belarus Community of People Living with HIV <http://www.hiv.by/>

Country:

Estonia

Law

Penitentiary Code of Estonia⁷

Article 118. *Causing of Severe Health Damage:*

Part 1. 1) threat to someone's life; 2) a health disorder that lasts at least four months and is associated with a permanent disability of at least 40 percent of full working capacity; 3) severe mental disorder; 4) termination of pregnancy; 5) incurable damage, a significantly disfiguring face; 6) loss of an organ or its functioning; 7) death, - is punished by imprisonment for a term of four to twelve years.

Part 2. The act provided by this article, committed by a legal entity, - is punished by pecuniary punishment.

Article 119. *Causing of Severe Health Damage out of Negligence.*

Part 1. Causing of severe health damage out of negligence - is punished by pecuniary punishment or imprisonment for up to one year.

Part 2. The same act, which caused severe health damage of two or more people, - is punished by imprisonment for up to three years.

Part 3. An acts in part 1 or part 2 of this article committed by a legal person - is punished by pecuniary punishment.

Other Laws for Considerations:

Article 121. Physical abuse. Damaging the health of someone else, hitting, kicking or other form of physical abuse causing pain - is punished with fine or up to three years in jail. The same act is punished up to 5 years in jail, if it lasting not less than four weeks; committed in close or dependent relationships; or committed repeatedly.

Article 141. Rape. Having sexual intercourse with someone against her/his will or abusing her/his condition where he/she was not capable of understanding what is happening or expressing resistance is punished by imprisonment with one to five years. The same act is punished with 6-15 years in jail, if the victim is under 18 years old, if the act is carried out by two or more people, if the act has caused the victim a severe health damage or the death of the victim, if the act has driven the victim to suicide or suicide attempt or if the act has been carried out by a person, who has previously already committed a rape.

Prosecution

There appears to be 4 cases that resulted in at least 3 convictions in Estonia. In 2017, a case⁸ on HIV criminalization was highlighted in Estonia. An HIV positive man was sentenced to 3 years and 6 months of imprisonment under the article 118 "Causing of Severe Health Damage" by the Harju County Court of Tallinn. Prosecution authorities made the case open to the public inclusive of this name, photo and HIV status.

Discussion

In Estonia, there is no HIV specific law. All HIV related cases are based in the criminal law and classified as causing health damage or abuse. While the 2017 case was sensationalized by the media there were a number of prominent voices that did speak out publicly in the media to talk about the harms of HIV criminalization in regards to the case.

The Criminal Code of Georgia, Chapter XXI, Endangering Human Life and Health.

Article 131. *“Infecting with AIDS”*⁹:

Part 1. Creating a threat of intentional infection of another person with AIDS, - is punished by imprisonment for up to three to five years.

2. Infecting intentionally other person with AIDS, - is punished by imprisonment for up to four to seven years.

3. Infecting by negligence another person with AIDS when performing professional duties, - is punished by imprisonment for a term of two to five years, with deprivation of the right to hold an official position or to carry out a particular activity for up to three years.

4. The act provided for by paragraphs 1, 2 or 3 of this article committed: a) to two or more persons; b) knowingly by the offender against a pregnant woman or a minor, - is punished by imprisonment for a term of five to nine years, with deprivation of the right to hold an official position or to carry out a particular activity for up to three years.

Other Laws for Considerations:

Article 132 of the Criminal Code, the *creation of a threat of infection with a particularly dangerous infectious disease* - is a punished by a large fine, 6 months of public works or imprisonment for up to 1 year. Part 2 of the same article indicates that a person can be held liable for intentionally creating a threat for contracting an especially dangerous infectious disease to others and in accordance can be punished by a fine, community service for up to a year and a prison sentence of up to two years. Aggravating circumstances for these crimes include intentionally creating threat of contracting or contracting an especially dangerous infectious disease to two or more people or a pregnant woman or a minor. The punishment in such circumstances is deprivation of freedom for two to five years.

Law of Georgia on HIV Infection/AIDS¹⁰,

Article 8 - *Obligations of service provider institutions and personnel:*

Part 6. Service provider institutions which implement the diagnostics, treatment, prophylaxis, support/assistance and/or care of persons infected with HIV and/or ill with AIDS are obliged to request information from persons infected with HIV and/or ill with AIDS on those person(s) with whom they have had contact which might pose a risk from the epidemiological point of view.

Part 7. If persons infected with HIV and/or ill with AIDS fail to fulfil the requirements defined in Article 11(2) of this Law, service provider institutions which implement the diagnostics, treatment, prophylaxis, support/assistance and/or care of persons infected with HIV and/or ill with AIDS, are obliged to notify a spouse and/or a sex partner of such persons with regard to the HIV positive status of such persons as provided for by the legislation of Georgia, if the identity of the spouse and/or sex partner is known.

Article 11 - *Duties and responsibilities of persons infected with HIV and/or ill with AIDS:*

Part 1. Persons infected with HIV and/or ill with AIDS shall be responsible for creating a threat of infecting persons and transmitting AIDS to other persons as provided for by the legislation of Georgia.

⁹ LAW OF GEORGIA, CRIMINAL CODE OF GEORGIA <https://matsne.gov.ge/en/document/download/16426/157/en/pdf>

¹⁰ Legislative Herald of Georgia. (2009). Law of Georgia On HIV Infection/AIDS. Retrieved from <https://matsne.gov.ge/ru/document/download/90088/3/en/pdf>

Part 2. Persons infected with HIV and/or ill with AIDS who know about their HIV positive status are obliged to inform their spouse and/or sex partner about their HIV infection in a prescribed manner.

Prosecution

Since the law was created in 1995 and later updated in 2000 there has been little data collected in Georgia. In previous work done by the HIV Justice Network and the GNP+ HIV criminalization scan respondents provided information about two cases involving heterosexual couples¹¹. In the data collection process, local informants gave information regarding a possible additional case of a male who transmitted HIV to his wife and was sentenced to 4 years in prison and served 2. It is unknown if this is the same case as one of the two previous cases.

Discussion

While in Georgia there are both HIV specific laws as well as general laws that can be used to convict a person living with HIV of exposure and/or transmission the data is limited in the application of these laws in practice.

Media monitoring

No media stories were found in relation to HIV criminalization in Georgia.

Law

The Criminal Code of Republic of Kazakhstan,

Article 118.¹² *Infection with human immunodeficiency virus (HIV/AIDS)*

Part 1. Deliberately endangering another person by HIV/AIDS - is punished by by a fine in the amount of from 200 (two hundred) monthly calculation indicators or correctional labor in the same amount, or by bringing to public works for up to 180 (one hundred and eighty) hours, or by arrest for up to sixty days.

Part 2. Infection of another person with HIV/AIDS by a person who knew that he had the disease - is punished by imprisonment for a term up to five years.

Part 3. The action envisaged in part 2 of this article, committed against two or more persons, or against a minor - is punished by an imprisonment for a term from four to eight years.

Note. A person who committed acts specified in parts one or two of this article shall be released from criminal liability in the event that another person placed at risk of infection or infected with HIV/AIDS was timely warned about the presence of this disease and voluntarily agreed to commit the acts that created risk of infection.

Other Laws for Considerations:

Article 429 of the Code of the Republic of Kazakhstan on Administrative Offenses¹³. *Evasion from medical examination and treatment of persons in contact with HIV-infected persons, AIDS patients, venereal diseases, tuberculosis, as well as persons who consume narcotic drugs or psychotropic substances without prescribing a doctor:*

1. Evasion of medical examination and treatment of persons in contact with HIV-infected people, AIDS patients, venereal diseases, tuberculosis, continuing after a written warning issued by the health care institution - entails a fine in the amount of five monthly calculation indicators.

2. Evasion of medical examination and treatment of persons recognized as sick with alcoholism, drug addiction and substance abuse, or for which there is sufficient evidence that they use narcotic drugs or psychotropic substances without prescribing a doctor - entails a penalty in the amount of ten monthly calculated indicators.

Prosecution

There is limited data as to how many people have people have been charged and convicted with HIV related offenses in Kazakhstan. Under Article 116 there have been at least 5 known cases of people living with HIV being convicted of transmission of HIV including 1 in 2017. Additionally, as reported by HIV Justice Network in 2015, 98 sex workers living with HIV were identified by police and their clients tracked for possible transmission but no further information regarding prosecutions could be found. On May 19, 2017, in Astana, police conducted raids and forcibly tested 163 women sex workers for HIV^{14,15}.

Under Article 429, which speaks to medical malpractice in relation to HIV 21 health care providers were convicted with sentences varying from 9 months to 8 years in prison in 2007¹⁶.

Discussion

Although the number of cases of HIV criminalization appear small in Kazakhstan, there are a concerning number of reports in relation to human rights violations of sex workers in regards to forced testing. In these cases, there is concern that if any of the sex workers did test positive for HIV then what measures would be taken towards them.

Law

Criminal Code, Chapter VIII, Offenses against Public Health and Social Cohabitation¹⁷,
Article 212. *Contamination with AIDS disease:*

Part 1. Deliberately exposing another person to the risk of contamination with AIDS - is punished by imprisonment up to 1 year.

Part 2. Contamination with the AIDS disease by a person who knew that s/he had the disease - punished by imprisonment from 1 up to 5 years

Part 3. The same offense exercised: a. repeatedly b. against two or more persons c. deliberately with a juvenile (minor)- is punished by imprisonment from 3 up to 8 years.

Part 4. Contamination with the AIDS disease as a result of non-exercising or unsatisfactory exercising of functional duties by a medical professional - is punished by imprisonment up to 5 years with deprivation of the right to occupy particular position or exercise particular activity for a period of up to 3 years.

Part 5. Criminal responsibility is waived for part 1 and 2 of this article if the person has prior notified the person placed in the risk to HIV transmission, or if the exposed person knew the other one is HIV infected but has consented to engage in activities that exposed her/him to HIV transmission.

Legislation of Transnistria

The Criminal Code¹⁸,

Article 119 “*Infection with HIV*”:

Part 1. Knowingly placing another person at risk of contracting HIV - is punished by imprisonment for up to 1 year.

Part 2. Infection of another person with HIV by a person who knew about the presence of this disease - is punished by imprisonment for a term of up to five years.

Part 3. The action envisaged in part 2 of this article committed against two or more persons, or against a knowingly minor - is punished by imprisonment for a term of 3 to 8 years.

Part 4. Infection of another person with due to improper performance by a person of their professional duties - is punished by imprisonment for a term of up to 5 years with deprivation of the right to occupy particular positions or engage in particular activities for a term of up to 3 years.

Note. A person who committed acts specified in parts 1 or 2 of this article shall be exempted from criminal liability if the person who placed at risk of infection or infected with HIV was timely warned about the disease and voluntarily consented to the actions that created danger of exposure.

Other Laws for Consideration:

Article 211 of the Criminal Code of Moldova “Transmission of venereal diseases”¹⁹: A person who knew that he/she had a venereal disease transmits it to another person - is punished by a fine in the amount of 500 to 850 conventional units, or by unpaid public work for a period of 120 to 200 hours, or by imprisonment for up to 1 year. The same offense exercised: a.

repeatedly b. against two or more persons c. deliberately with a juvenile (minor) - is punished by a fine in the amount of 550 to 1050 conventional units, or by unpaid public work for a period of 180 to 240 hours, or by imprisonment for up to 2 years.

AIDS Law of the Republic of Moldova²⁰, Chapter VII, Article 29: The responsibility of people living with HIV shall act responsibly to protect their personal state of health and prevent HIV transmission. A person aware of his/her HIV status and *knowingly endangering the contamination of another person can be charged with a criminal offense.*

In Transnistria, the Code of Administrative Offenses²¹, Article 6.3: “Concealment of the source of HIV infection, venereal disease and contacts creating a risk of infection”: The concealment by a person who sick HIV, venereal disease, the source of infection, as well as information about people who had contacts with the specified person, creating a risk of contracting these diseases - is punished by an administrative fine in amount of from 50 to 150 estimated minimal wage.

Prosecution

The use of the criminal laws in relation to HIV exposure or transmission is rare in Moldova and the territory of Transnistria. However, there are at least 5 people who have been charged and convicted using Article 212 with the most recent case identified in June of 2017²². Three of these cases were based on a failure of the person living with HIV to disclosure their HIV status in a heterosexual relationship and one case in 2015 included a patient living with HIV “intentionally pricking” a nurse with a needle.

The statistics of cases on HIV related articles of the Penal Code in Transnistria are not reflected in official sources. However, according to information received from representatives of non-governmental organizations, as well as medical institutions, in such cases prosecutors decline to bring charges and even less often result in sentencing. In 2014, on the official web page of the investigation committee of Transnistria²³ information about 32 year old man who was living with HIV was published including his name, year and place of birth as well as the year he was diagnosed with HIV. He was sentenced to 3 years of imprisonment under article 119, part 3 of Criminal Code, for HIV exposure to a minor. The confidentiality of another person was violated by the same authorities in 2015 they published a public document about a 33 year old man living with HIV who was sentenced for the crime not related with HIV exposure (theft)²⁴.

For this report, civil society partners working in country, gave detailed case studies between 2015 – 2017 of 10 people living with HIV’s experience having their sexual partners and, in one case a health care practitioner, report to the police about their non-disclosure of HIV which thereby “putting them at risk of transmission.” In the majority of these cases there was some

police intervention but these amongst other cases could not be further researched within a country context.

Discussion

In Moldova it is believed difficult to prove guilt when there are many variables in relation to HIV. For example, in a heterosexual context many couples test positive first during a couple's pregnancy. Due to the nature of the current law it is difficult to prove the elements of the legal case including whether the HIV was known prior to the relationship and this creates further difficulties proving the required element of intent of either individual. There are numerous situations after the dissolving of a couple where one party approaches the police stating that they were put at risk of HIV transmission. Civil society organizations have reported that these cases are frequently recognized as retaliation or spite, and are therefore not frequently pursued by prosecutors in country. In addition, a person's sexual history can be used in a criminal trial which makes legal action potentially undesirable for those who seek to bring cases regarding not being able to prove causation and guilt as well the potential for the trauma of having their sexual history used to discredit them in court.

The issue with the application of Article 212 of the Criminal Code is that the composition of the crime is not correct by the terminology. While there is common understanding of the difference between the HIV and AIDS definition, the Criminal Code of the Republic of Moldova applies the concept of "AIDS disease", which is incorrect from the medical point of view. No one is infected with AIDS; AIDS is not an infectious agent²⁵. UNAIDS Terminology Guidelines²⁶ also call to stop the use incorrect terminology and indicates the preferable use of language such as "the risk of contracting HIV" or "the risk of exposure to HIV".

The criminal laws of Moldova and Transnistria contain special offenses for cases of deliberate and intentional transmission of HIV by a person who knows of the existence of such a disease or by a medical worker in the event of non-fulfillment (improper performance) of professional duties.

Law

The Criminal Code of the Russian Federation,
Article 122²⁷. *HIV transmission*

Part 1. Deliberately endangering another person by infecting with HIV infection - is punished by imprisonment for up to three years, or public service for up to one year, or imprisonment for up to six months, or imprisonment for up to one year.

Part 2. Infection of another person with HIV by a person who knew that he had the disease - is punished by imprisonment for a term up to five years.

Part 3. The action envisaged in part 2 of this article committed against two or more persons, or against a minor - is punished by imprisonment for a term up to 8 years, with deprivation of the right to occupy particular positions or engage in particular activities for up to ten years or without it.

Part 4. Infection of another person with HIV as a result of improper fulfillment of professional duties - is punished by public service for a term up to five years, with disqualification to occupy particular positions or engage in particular activities for up to three years or without it, or imprisonment for up to five years, with deprivation of the right to occupy particular positions or engage in particular activities for up to three years.

Note. A person who commits an act stipulated by part 1 or 2 of this Article shall be exempt from criminal liability if the another person set out in the risk of infection or infected with HIV, was a timely warned of the presence of the disease and voluntarily consented for the acts that created the risk of infection transmission²⁸.

Other Laws for Considerations:

Administrative Code of the Russian Federation, Article 6.1. *Concealment the source of infection with HIV, venereal disease and contacts that create the danger of infection:* Concealment by a person who sick HIV, venereal disease, the source of infection, as well as information about the persons who had contacts with the specified person, creating a risk of contracting these diseases - is punished by an administrative fine in the amount of five hundred to one thousand rubles.

Prosecution

The Russian Federation is leading the region in prosecuting people living with HIV for transmission and exposure. In 2015, there were 45 people convicted, increasing to 55 in 2016. And by June 2017 there were already 26 cases reported. The 2015 – 2017 data collection shows that all the 126 cases have applied to heterosexual relationships.

In total for the period 1997 - the 1st half of 2017, 548 people living with HIV convicted under the article 122 (part 1-4), and 255 people - under additional qualifications.

Administrative Code of the Russian Federation Article 6.1. concerns a person living with HIV “*Concealment the source of infection with HIV, venereal disease and contacts that create the danger of infection.*” While it was difficult getting numbers of total number of cases in relation to people living with HIV being charged with Article 6.1 from the Administrative Code, since

²⁷ Уголовный кодекс РФ 2017 Актуальная редакция (The Criminal Code of the Russian Federation). (2017). Статья 122 УК РФ. Заражение ВИЧ-инфекцией (Article 122 of the Criminal Code. Infection with HIV). Retrieved from <http://ukodeksrf.ru/ch-2/rzd-7/gl-16/st-122-uk-rf>

²⁸ Note introduced by the Federal Law of 08.12.2003 N 162-FZ

2015 there have been 398 cases. With 125 in 2015 and 205 occurring in 2016. 68 cases had been reported in the first half of 2017.

This offense is committed by a person's inaction or omission. For example, if a person living with HIV does not inform health care workers of the "necessary" information for the state to properly conduct an epidemiological investigation. An epidemiological investigation includes reporting from whom a person may have contracted HIV, and those persons endangered by HIV transmission. First of all, they are family members, sexual partners, and in case a person living with HIV uses drugs - all persons with whom s/he jointly injected drugs. The responsibility can be ascribed to a person reached 16 who learnt their HIV status after medical examination.

The fine under this article is small, but the judicial procedure is stigmatizing. A fine is the punishment received mainly by those who do not appear at their court hearing. Those who do attend their court date states they do not know how they was infected. By answering this them or their previous lovers they are not punished.

Discussion

In the Russian Federation, people living with HIV are mandated to register with the public health authorities as well as inform health care workers and those close to the person living with HIV of their HIV status. If not a person faces possible legal action through Article 6.1 of the Administrative Code. This practice enables and perpetuates HIV stigma through administrative means and public shaming. Many people living with HIV avoid potential breaches in by not showing up to the hearing making them automatically liable to pay a set fine. These fines while limited are often an additional administrative and financial burden for many people living with HIV in the Russian Federation. For example, in 2016 there were a total of 205 cases and a total of 359,600 rubles in total fines.

Civil society partners reported that women in particular are harmed by breeches in their confidentiality as their HIV has then led to be used to justify violence and abusive situations. 17 year old young woman living with HIV who was sexually and physically assaulted, was later accused on putting the 31 year old man who abused her at risk refused to use condom²⁹. He blackmailed her by shared her photos and information about her HIV status. She was interrogated by police without legal representation despite being a minor. To assist in countering these gender based inequalities, the Association of Patients and Professionals, helping people with HIV, Hepatitis and other socially significant diseases "EVA"³⁰, has a program *Equal Protects the Equal* that provides free legal support to women living with HIV. This program reported numerous case studies of women living with HIV who have been blackmailed, threatened, and experienced violence using Article 122 to threaten police intervention if the women do not comply.

Article 122 was first drafted in 1996, and was later amended in 2003 to make a person living with HIV "*exempt from criminal liability if the another person set out in the risk of infection or infected with HIV, was a timely warned of the presence of the disease and voluntarily consented for the acts that created the risk of infection transmission.*" This amendment showed some improvement form the original draft and some flexibility from the Russian Federation. An opportunity opened for further changes to be made to the federal law based on Clause 15 of the Plan of Measures for the Implementation of the State Strategy for HIV Response in the

Country:
Tajikistan

Law

Criminal Code of the Republic of Tajikistan³²,

Article 125. *Infecting with Human Immunodeficiency Virus.*

Part 1. Knowingly exposing another person in danger of HIV infection - is punished by restriction of freedom for up to three years or imprisonment for up to two years.

Part 2. Infection of HIV of another person by a person who knew that he had this disease - is punished by imprisonment for a term of five years.

Part 3. The act envisaged in part 2 of this article, committed: a) against two or more persons; b) against a minor - is punished by imprisonment for a term of five to ten years.

Prosecution

While collecting data for this report a key informant from Tajikistan shared information disclosed by other legal practitioners in a legal training. The two cases shared involved heterosexual sexual encounters. One of the cases settled outside of court and the results of the second are unknown.

Discussion

In previous reports, there appeared to be no known HIV criminalization cases. What has been reported by in country informants is that key populations experience human rights abuses such as mandatory HIV testing of sex workers and gay men.

A more in depth data collection process needs to be completed in country.

Media monitoring

No media stories could be found in relation to HIV criminalization cases.

Ukraine

Law

The Criminal Code of Ukraine³³,

Article 130. *Infection with HIV or any other incurable contagious disease*

Part 1. Knowingly placing of a person in danger of HIV exposure or any other incurable contagious disease dangerous to human life, - is punished by arrest for a term up to three months, or by restraint of liberty for a term up to five years, or imprisonment for a term up to three years.

Part 2. Infection of another person with HIV or any other incurable contagious disease by a person who was aware of himself or herself being a carrier of this virus, - is punished by imprisonment for a term of two to five years.

Part 3. Acts envisaged in part 2 of this Article, committed against two or more persons or a minor, - is punished by imprisonment of three to eight years.

Part 4. Deliberate contamination of another person with HIV or any other incurable contagious disease dangerous to the person's life, - is punished by imprisonment for a term of five to ten years.

Other Laws for Considerations:

Article 132. *Disclosure of information on the conduct of a medical examination for the detection of infection with the human immunodeficiency virus or other incurable infectious disease.* Disclosure by an official of a medical institution, an assisted employee who has received information unauthorized, or a medical worker about the conduct of a medical examination of a person for the detection of infection with the human immunodeficiency virus or other incurable contagious disease dangerous to human life or the acquired immune deficiency syndrome (AIDS) and its results, which became known to them in connection with the performance of official or professional duties, - is punished by a fine of fifty to hundred tax-free minimum incomes of citizens or public works for up to two hundred and forty hours, or correctional labor for up to two years, or restriction of freedom for up to three years, with deprivation of the right to occupy particular positions or engage in particular activities for up to three years or without it.

The Law On the Response to the spread of diseases caused by the human immunodeficiency virus (HIV), and the legal and social protection of people living with HIV (AIDS Law) in Ukraine³⁴. Chapter II, Article 12: *Duties of People living with HIV*

- 1) take measures to prevent the spread of HIV infection, proposed by health authorities;*
- 2) notify the persons who were their partners before revealing the fact of infection, about the possibility of their infection;*
- 3) refuse donation of blood, its components, other biological fluids, cells, organs and tissues for their use in medical practice.*

Infection with HIV or a virus of another incurable infectious disease that occurred as a result of inadequate performance by a medical, pharmaceutical or other employee of his or her professional duties due to careless or dishonest treatment of them qualifies under Article 131 Criminal Code of Ukraine and is punished by imprisonment up to 3 years or the same with the

Преступления против жизни и здоровья личности (Section 2 - Criminal Code of Ukraine, Crimes against life and health of the person). Retrieved from <http://meget.kiev.ua/kodeks/ugolovniy-kodeks/razdel-1-2/>

³⁴ Законодавство України (Legislation of Ukraine). (2012). Про протидію поширенню хвороб, зумовлених вірусом імунодефіциту людини (ВІЛ), та правовий і соціальний захист людей, які живуть з ВІЛ (On the response to the spread of diseases caused by the human immunodeficiency virus (HIV), and the legal and social protection of people living with HIV). Retrieved from <http://zakon4.rada.gov.ua/laws/show/1972-12>

deprivation of the right to occupy particular positions or engage in particular activities for up to three years. Under this article in 2012 the doctor from Mariupol, Donetsk region, was found guilty for contracting HIV to 3 children in 2005³⁵ and sentenced for 5 years to prison. Under Article 132 - for disclosure of the confidential information - medical worker of the orphanage institution in Simferopol, Crimea, was found guilty³⁶ in 2013.

Prosecution

The law states that the placing of another person at the risk of HIV transmission may include, in particular, the implementation, without precautionary measures, of sexual contacts, regardless of their hetero- or homosexual orientation; the provision by the donor-HIV-infected person - of his blood or tissues; non-compliance with preventive measures aimed at preventing the spread of HIV infection (for example, sharing needles for injecting narcotic drugs). However, the known legal cases filed in the Ukraine are in relation to heterosexual relationships and at least one case of biting³⁷. From 2015 – mid 2017 there were 29 new cases registered with 8 convictions.

The crime in relation to Part 1 of Article 130, responsibility of lies in that of the person living with HIV. Responsibility needs to be taken regardless if a person knows their HIV status or if it could be assumed that they were living with HIV because of high risk activity (for example a sex worker or person who uses drugs). It is not defined by the courts what constitutes a “threat” or risk. This has been subject the judges knowledge and interpretation. Article 130, part 1 of the Criminal Code of Ukraine "Infection with the human immunodeficiency virus or other incurable infectious disease" punishes placing another person at risk of contracting HIV or another incurable infectious disease, even without actual intention to do so or actual transmission of the infection to another person.

Discussion

Ukraine has some strong human rights language and legislation to protect people living with HIV. The rights of people living with HIV are described in the AIDS Law. The Rights and Social Protection of People Living with HIV and Their Family Members are presented in; Article 13. The right of people living with HIV to information. Protection of information about a person's HIV positive status from disclosure and disclosure to third parties; Article 14. Equality before the law and prohibition of discrimination against people living with HIV and people belonging to high risk groups for contracting HIV; Article 15. Other rights of people living with HIV; Article 16. Protection of the right to work and other social rights of people living with HIV, their relatives and friends; Article 17. Compensation for harm caused to human health in the event of infection with HIV; Article 18. Rights of parents of HIV-infected children and children suffering from HIV-related illness; and Article 19. State aid to HIV-infected children and children suffering from HIV-related illness.

The provisions in the Criminal Code of Ukraine contradict the implementation of state policy aimed at counteracting HIV infection. In particular, Article 4 of the AIDS Law indicates that the state guarantees the implementation of a consistent policy aimed at creating a tolerant attitude towards people who are at high risk of HIV infection and people living with HIV; carrying out information activities aimed at creating a tolerant attitude and the inadmissibility of discrimination against people belonging to high risk groups for contracting HIV and people

living with HIV. Article 130, part 1 of the Criminal Code of Ukraine “Infection with the human immunodeficiency virus or other incurable infectious disease” punishes placing another person at risk of contracting HIV or another incurable infectious disease, even without actual intention to do so or actual transmission of the infection to another person. Although this norm is aimed at reducing the level of HIV transmission, in practice it leads to the opposite effect: it increases the stigmatization of people living with HIV, limits their access to treatment and reduces the effectiveness of government measures to combat HIV. For women, it increases the risk of them contracting, violence, and gender inequality in healthcare facilities, in society and in the family.

Ukrainian legislation does not correspond to modern practice of legal regulation of HIV criminalization because it is discriminatory towards partners of discordant couples, and also increases the risk of transmission in these case due to partners not wanting to access treatment. Key population groups, such as people who use drugs and sex workers, are pathologized and considered contagious carriers of HIV and other transmittable infections. They are often blamed for the HIV epidemic, rather than overcoming structural barriers to health services.

In 2017, USAID's HIV Reform in Action Project, assessed the political and legal environment in the relation to the HIV response in Ukraine with the participation of a number of national and international stakeholders³⁸. Among the key recommendations that were given to the legislative branch and the Ministry of Health of Ukraine on the topic “Equality and Legal Protection”, the following was proposed:

- Exclude articles 130 and 133 from the Criminal Code of Ukraine as those that criminalize the transmission of HIV.
- Review article 121 of the Criminal Code of Ukraine (on intentional infliction of grievous bodily harm) and remove therefrom references to HIV. To introduce similar changes in the Rules of forensic medical determination of the severity of bodily injuries, approved by order of the Ministry of Health of Ukraine from 17.01.1995 No. 6, so that they no longer apply to HIV-infected persons.
- Remove the words “human immunodeficiency virus”, “HIV”, “Acquired Immunodeficiency Syndrome Syndrome”, “AIDS” from the Criminal Code of Ukraine, as well as the names of any other diseases that are used in the context of criminal liability of persons who carry the causative agents of these diseases, as being discriminatory on the basis of the state of health.
- Amend the Rules for Forensic Medical Determination of Severity of Bodily Injuries, approved by Order No. 6 of the Ministry of Health of Ukraine of 17.01.1995, with the aim of regulating the procedure for determining the severity of injuries in case of HIV infection or the causative agent of another sexually transmitted disease.

In 2016, the All-Ukrainian Network of People Living with HIV prepared the bill “On Amendments to Certain Legislative Acts of Ukraine Concerning Criminal Responsibility for the Transmission of the Human Immunodeficiency Virus (HIV) and Other Infectious Diseases.” This bill proposes to exclude articles 130 (“Infection with human immunodeficiency virus or other incurable disease”) and 133 (“Venereal disease”) from the Criminal Code of Ukraine. It also stated to stop discriminatory legal practices, which do not prevent the spread of HIV and states that these criminal laws against people living with HIV lead to the fear of criminal prosecution and the refusal of medical examination and follow up in services. International institutions such as UNAIDS and UNDP also advocate in country to end HIV criminalization. To the date of this report the Ministry of Internal Affairs of Ukraine does not indicate readiness for change on this issue.

Law

The Law of the Republic of Uzbekistan,

Article 113. *Spreading of a sexually transmitted disease or HIV-infection/AIDS*³⁹

Part 3. Deliberately endangering another person or infecting them with HIV-infection/AIDS - is punished by imprisonment from five to eight years.

Part 4. Infection of another person by HIV-infection/AIDS due to non-fulfillment or inadequate performance by a person of their professional duties - is punished by a fine of one hundred to two hundred minimum monthly wages or compulsory public works from three hundred and sixty to four hundred and eighty hours, or correctional labor up to two years, or restriction freedom from two to five years or imprisonment up to five years.

In 2010, in Article 113 in the title and disposition of the part 4 of the word “AIDS disease”, replaced, with the words “HIV-infection/AIDS”.

All couples who want to register civil marriage, should pass mandatory HIV testing as stipulated by the Family Code of Uzbekistan.

Other Laws for Considerations:

Code of the Republic of Uzbekistan on Administrative Liability.

Article 57. *Concealment the source of infection with venereal disease or HIV/AIDS.* Concealment a source of infection by people with a sexually transmitted disease or HIV infection/AIDS, as well as those who had contact with him, creating a risk of contracting a sexually transmitted disease or HIV/AIDS, - is punished by a fine of two to three amounts of the minimum wage.

Article 58. *Evasion of patients with sexually transmitted diseases or HIV infection/AIDS from examination.* Avoiding an examination of persons for whom there is sufficient evidence that they are sick with sexually transmitted diseases or HIV/AIDS, which continues after a warning from health authorities - is punished by a fine of two to three amounts of the minimum wage.

Prosecution

While it is difficult to say how many cases have been brought before the courts using Article 161 because there is limited documentation in the public court systems and even less available in the media. One case involving a heterosexual couple, transmission and reported non-disclosure of an individual’s HIV status is currently on record in 2016⁴⁰. There is also a case regarding 13 doctors and health care providers prompted the changes to add a provision that makes health care practitioners liable for transmission of HIV after 147 children contracted

³⁹ Article 113 as amended by the Law of the Republic of Uzbekistan dated 24 May 2010 No. ZRU-248 - SZ RU, 2010, No. 21, Article 161 O'zbekiston Respublikasining milliy qonun hujjatlari bazasi (National Database of Legislation of the Republic of Uzbekistan).(May 2010). 113-modda O'zbekiston Respublikasining qonunlarida tahrir qilingan (Article 113 as amended by the Law of the Republic of Uzbekistan). HIV in Namangan⁴¹⁴² following poor sanitation and precautionary practices in 2016. Fourteen of the children later died. Prosecutors found that doctors had failed to sterilize catheters, had reused disposable syringes and needles for taking blood samples, and also had falsified sterilization records and later destroyed evidence. Twelve were sentenced to prison for 5-8 years. Nine other health care workers from district hospitals in Namagan region were investigated, but the government has not made any information available. In 2017, another group of doctors in Andijan were also charged with negligence resulting in their patients contracting HIV⁴³⁴⁴.

Civil society informants gave details of other 4 other cases, of which 2 cases involved heterosexual couples. In both cases, the partners were informed of the HIV status prior to their HIV acquisition but their partners were convicted for 3 - 5 year sentences. In one of the cases, after contracting HIV, an HIV positive man's wife was deported back to her home country after contracting HIV while her husband was sentenced to 5 years in prison. Another case concerns a doctor charged under Article 113, for not notifying a pregnant woman of the HIV status of her future husband prior to her becoming pregnant. The doctor was sentenced to 2 years in prison plus had to pay damages. Neither the woman or the child contracted HIV. Finally, civil society shared a case of a woman living with HIV that was convicted of drug related charges but due to her have status the court increased the length of her sentencing as well as charging her under Article 113.

There have been other instances where people have had other general laws used to convict them such as in the case of an Uzbek psychologist who created and distributed HIV educational information that talked about using condoms and harm reduction for people who use drugs was sentenced to 7 years in prison⁴⁵. He was found guilty of numerous crimes that did not refer to the creation and distribution of information about HIV under several articles of the Uzbek Criminal Code, including "Involving a minor in antisocial behavior" and "Involvement in the use of narcotic drugs or psychotropic substances".

Discussion

In Uzbekistan, there is limited knowledge about HIV and it is rarely in the media. While HIV criminalization is an issue in Uzbekistan because of strict regulations of the government it is extremely difficult for NGOs and civil society to know and/or intervene in such cases.

In regards to Article 113, "knowingly" means that the person was aware of the presence of HIV oneself, and nevertheless puts another person in at risk of potential transmission regardless of the act risk. Article 113 of the Criminal Code is characterized by intent, since it has a formal composition. Despite couples having evidence indicating that the HIV negative partner is aware of the HIV positive status of the other partner, it is usually not taken into account in criminal
